While Climate Change is global, most climate action will take place at the local level. Before diving deeper into the application of NbS at the urban level, through this interactive workshop we want to highlight possible capacity building pathways for urban local bodies to continuously deal with the dynamic challenges that are likely to manifest due to climate change.

Across functional areas and geographic settings, there is tremendous opportunity in leveraging systems-based management innovations that have been emerging globally. The Enterprise Evolution program helps municipalities build the capabilities they will need to more effectively adapt to accelerating change and increasingly complex external conditions. In recent years, a wide range of systems-based management knowledge, methods and tools have been developed to address different aspects of the three strategic management functions (strategic planning, performance management, stakeholder engagement) at the local level. In this session, we will explore the enterprise evolution and how it can help in the application and mainstreaming of NbS in urban areas.

In this interactive session, we aim to highlight ways to apply Enterprise Evolution in practice, which can be tailored to match each municipality's unique profile, challenges, needs, and priorities, in the context of development pathways including the Nature-based solutions development pathway.

This session is designed around the capacity building at the local level to facilitate innovation and transformative climate action.
