

Call for Water Professionals to Fill Out Survey on Constructed Wetlands

24 November, 2017

Information on constructed wetlands is currently unevenly distributed. UNU-FLORES has designed a questionnaire to identify the needs of potential users of a global platform on constructed wetlands. Wastewater professionals from science and practice are called on to share their needs through a brief online survey and secure a digital copy of Safe Use of Wastewater in Agriculture: Good Practice Examples

To address challenges of untreated wastewater and to increase recycling and safe use, UNU-FLORES researchers are creating a central digital platform on constructed wetlands. The platform will compile accessible data and provide a mechanism for data submission. To shape this complex web solution according to the needs of its potential users, wastewater professionals from science and practice are called on to share their needs in an online survey, based on their best knowledge.
