Health Leadership Series 2015  
**Safeguarding human health  
in the Anthropocene epoch**

The Rockefeller Foundation-Lancet  
Commission Report

Professor Anthony Capon

**While human health is better now than at any time in history, these gains have come at a high price: the degradation of nature's ecological systems on a scale never seen in human history.**

Professor Capon introduces the report, which argues for a new discipline called 'planetary health' founded on eco-social understandings of health.

**Professor Anthony Capon** directs the International Institute for Global Health at United Nations University in Kuala Lumpur, Malaysia. He is a member of the Rockefeller Foundation-Lancet Commission on Planetary Health, which published the report in July.
