Preface and acknowledgements	ix
List of contributors	xi
1 Reimagining fire management in fire-prone northern Australia	1
<i>Jeremy Russell-Smith and Peter J Whitehead</i>	
Introduction	1
Fire mapping and contemporary burning patterns	2
Ecological and cultural landscapes	4
A reimagined future for managing the savannas	11
Fire management in a transformed savanna economy	15
2 Fire patterns in north Australian savannas: extending the reach of incentives for savanna fire emissions abatement	23
<i>Peter J Whitehead, Jeremy Russell-Smith and Cameron Yates</i>	
Introduction	24
Methods	26
Results	30
Discussion	45
3 Fire extent mapping: procedures, validation and website application	57
<i>Rohan Fisher and Andrew C Edwards</i>	
Introduction	58
Burnt area mapping methods	60
NAFI MODIS validation methods	62
Discussion	69
4 Vegetation fuel type classification for lower rainfall savanna burning abatement projects	73
<i>Dominique Lynch, Nicholas Cuff and Jeremy Russell-Smith</i>	
Introduction	73
Vegetation fuel type classification	74
Vegetation fuel type class	75
Mapping fuel types	88
5 The operational role of satellite-based fire data in savanna burning methodologies	97
<i>Peter Jacklyn, Shaun Ansell, Aaron Crosbie, Jarrad Holmes, Aidan Joseph, Sarah Legge, Ben Lewis, Anna Pickworth, Tom Vigilante and Jake Weigl</i>	

Introduction	97
Methods	98
Results	99
Discussion	109
Recommendations	111
6 Fuel accumulation, consumption and fire patchiness in the lower rainfall savanna region	115
<i>Cameron P Yates, Jeremy Russell-Smith, Brett P Murphy, Mark Desailly, Jay Evans, Sarah Legge, Fay Lewis, Dominique Lynch and Andrew C Edwards</i>	
Introduction	116
Field program	116
Fuel load accumulation	117
Fire patchiness	123
Burning efficiency factors (BEFs)	125
Discussion and summary	127
7 Leaf and coarse fuel accumulation and relationships with vegetation attributes in ‘evergreen’ tropical eucalypt savannas	133
<i>Nicholas Cuff and Peter Brocklehurst</i>	
Introduction	134
Methods	135
Data preparation	141
Results and discussion	142
Conclusion	160
8 Measuring and mapping fire severity in the tropical savannas	169
<i>Andrew C Edwards, Jeremy Russell-Smith and Stefan W Maier</i>	
Introduction	169
Methods and results	174
Discussion	178
Conclusion	181
9 Biomass combustion and emission processes in the northern Australian savannas	185
<i>CP (Mick) Meyer and Garry D Cook</i>	
Introduction	185
Definitions: emission factors and MCE	190
Emissions from low rainfall savannas in northern Australia	191
Emission factors and the CFI	208
Conclusions	213
10 Application of a lower rainfall savanna burning emissions abatement methodology	219
<i>Jeremy Russell-Smith, Cameron P Yates, Jay Evans, CP (Mick) Meyer and Andrew C Edwards</i>	
Introduction	219
Fire frequency in the lower rainfall savanna burning abatement regional envelope	219
Outline of the lower rainfall savanna burning abatement methodology	220
Applying the lower rainfall abatement methodology to project examples	228

11	Reconciling ‘bottom-up’ and ‘top-down’ greenhouse gas accounting methodologies for savanna burning in northern Australia	235
	<i>CP (Mick) Meyer, Martin Cope, Ross Mitchell, Stuart Young, Sunhee Lee, Ashok Luhar and Susan Campbell</i>	
	Introduction	236
	Regional greenhouse gas accounting for the savanna woodlands	239
	Top-down accounting for reconciling bottom-up GHG methodologies	249
	Assessment of the accuracy of regional predictions	255
	Options for operational methods for estimating regional emissions: constraining and verifying CFI projects	267
12	Fire or water: which limits tree biomass in Australian savannas?	273
	<i>Brett P Murphy, Adam C Liedloff and Garry D Cook</i>	
	Introduction	274
	Climatic controls	275
	Disturbance-based controls	276
	Evidence from long-term fire experiments	278
	Demonstrated short-term impacts of fire on northern Australian savanna trees	279
	How important is the fire-mediated recruitment bottleneck in Australian savannas?	281
	Are northern Australian savannas special?	283
	Other disturbance-based controls of savanna tree biomass	284
	Woody thickening in savannas	285
	Managing fire to increase tree biomass in Australian savannas	286
	Conclusions	287
13	Predicting the effects of fire management on carbon stock dynamics using statistical and process-based modelling	295
	<i>Garry D Cook, Adam C Liedloff and Brett P Murphy</i>	
	Introduction	295
	The Three Parks analysis	295
	The FLAMES analysis	300
	Validation of the FLAMES model output	303
	Utility of the FLAMES model	304
	Impact of fire on carbon as predicted by the FLAMES model	305
	Generalisation of the predictions	309
	Reconciliation of the results	311
	Conclusions	315
14	Towards a methodology for increased carbon sequestration in dead fuels through implementation of less severe fire regimes in savannas	321
	<i>Garry D Cook, Adam C Liedloff and Brett P Murphy</i>	
	Introduction	321
	Methodology scope	322
	Calculation of carbon stock for the baseline period and the project period	322
	Project eligibility	323
	Permanence and the time to reach equilibrium	323
	Greenhouse gas assessment boundary	324
	Key uncertainties	324
	Conclusion	326

15 Where to from here?

329

Jeremy Russell-Smith, Mila Bristow, Peter Brocklehurst, Garry D Cook, Nick Cuff, Andrew C Edwards, Rohan Fisher, Lindsay B Hutley, Peter Jacklyn, Glenn James, Sarah Legge, Adam C Liedloff, Dominique Lynch, Stefan Maier, CP (Mick) Meyer, Catherine Monagle, Brett P Murphy, Sofia Oliveira, Peter J Whitehead and Cameron P Yates
